

Integrate ProfitSword with Book4Time

Organize and combine your spa's sales information from Book4Time by exporting data into ProfitSword's system.

Why integrate?

ProfitSword is a full-featured suite of data analysis and data warehousing tools designed for data analytics, operational functionality, and reporting for all levels of an organization. Book4Time integrates with ProfitSword by exporting key sales information via the Book4Time Data API for import into the ProfitSword system.

Key features

Centralized reporting: Reduce the time your company spends pulling reports from different sources and trying to reconcile them. By exporting your spa's sales data from Book4Time and uploading it to ProfitSword, you can leverage their advanced analytics to measure your sales performance, including daily and monthly productivity tracking.

The challenge:

When running a hotel spa or wellness center, it can be challenging to pull data from multiple systems to manually put reports together.

Errors can be made by combining data from multiple sources into one report throwing off sales numbers, projections and creating confusion.

Clients have told us time after time that their staff spend too much time inputting customer profile information.

The solution:

Book4Time automatically exports your daily sales revenue at the end of each day and uploads the data into ProfitSword using their APIs.

The result:

- ✓ An automated task that reports your spa's sales revenue directly to your data reporting system.
- ✓ The ability to pull consolidated reports from ProfitSword that include your spa's sales revenue.
