## Why integrate?

Jonas Club Software has been running thousands of large and small club operations for over 30 years in multiple countries around the world. The club software suite is a collection of over 60 software solutions designed to meet the needs of any membership management organization. When integrated with Book4Time, you can look up club member accounts in Jonas directly from the Book4Time system. Instant feedback informs your staff if a charge was successfully posted to the member's account, or declined.

## Key features

Post charges to member accounts managed in Jonas Club Software.

Receive instant feedback on the success/failure of a posting.

Simplify balancing between the two systems by ensuring only successful posted charges are recorded.

## The challenge:

When running a spa or wellness center, most Spa Directors can agree that a smooth integration between their club software and spa software is one of the most important parts of providing a seamless guest experience.

Guests can become impatient when you have to go back and forth between your club software and spa software trying to confirm their membership and spa appointment.

Guests expect a consistent experience which includes the ability to charge spa services and activity fees to their member folio.

Clients have told us time after time that their finance departments spend too much time sorting through long transaction reports to find successful transactions.

## The solution:

---

Allowing Book4Time to connect your Jonas Club software to our spa software helps to solve these issues with a two-way sync that allows the systems to relay information back and forth. When a guest checks out for their service, you can post the transaction to their member folio in Jonas, and Book4Time will only record successful charge postings.

## The result:

---

- ✓ A seamless experience for your guests as you can look up their membership Book4Time without having to switch to a second system.
- ✓ Happy guests who don't have to wait around to process payments after their appointments, they can simply charge the transactions to their room and pay the final bill when they check out.
- ✓ Posted charges that only include transactions that went through successfully save the finance department time and effort trying to balance the two systems.
